Action Plan Override

The Action Plan Override button on the Site Summary of the Alarm Dispatch Window opens the Action Plan Override pane. All Action Plans that apply for all received signals and possible action plan variation will be listed. Double- clicking on the action plan calls that action plan into the Dispatch Action Wizard for structured dispatch.

The Action Plan Override pane is also called by the "Check for Other Action Plans" step in action plans.

It is recommended to use this step before a partial or full clear to ensure all signals have been dispatched.
