

Alarm Dispatch Window

Last Modified on 10/26/2023 1:18 pm EDT

Alarms are handled in the Alarm Dispatch Window. Alarm Dispatch can be accessed from a Site Lookup, Alarm Buffer, or by Auto Feed.

The Alarm Dispatch Window is designed to bring as much information as possible to the operators during dispatch. Multiple 'panes' each display different information, more information can be seen in the fly-outs, and tabs can be selected to switch to other views.

The Alarm Dispatch Window is set to a minimum size and cannot be made smaller. The Alarm Dispatch window cannot be dragged off the screen, the minimum size will always stay on the viewable screen.
