User Partitions

[Site Groups](#) can be assigned to specific [Users](#) in the User Partitions utility. All Site Groups can be assigned with the All SG flag or searched in the Unassigned List and added to the Assigned list. The users will only have access to accounts that fall within the site groups they are assigned. This will filter Site Lookup, the Alarm Buffer and [Auto Feed](#). On the User Partitions list, there are buttons to add or remove all site groups from the Assigned list
