Linking Zones to Different Sites (using Alternate Xmit)

To link zones to different sites, follow the steps below using the Alternate Xmit feature.

1. On the configuration window, signal activity on a point can be re-directed to another account by entering data into the Alt Xmit field. The Alt Xmit will refer to a different site.

2. The Alt Xmit field is also on the "Area & Open/Close" window. This will re-direct all the traffic for an Area within a panel to be redirected to another Site.
