

Release Notes for STAGES version 2.1.15

### **Site Group Agency Licenses/Site Group State Licenses**

Added Expire Date and Fee fields

Site Summary flyout – agency license(s) will display; if no agency license then state license will display if exists

Alarm Dispatch – agency license will display in call list flyout, agency instructions window, and dial window

### **Xmit Code Control**

Added Line, Phone Number and Carrier fields - these fields are displayed on Site Group/Xmit Codes tab

### **Sizing**

The Site Group and Data Entry windows have been resized to fit all tabs in a 1280x1024 window.

### **Stages Gateway**

Enhancements made to the Stages Gateway. Details will be communicated separately

### **Manual Event**

Operators have the ability from the Alarm Dispatch window (regardless of the Lock Status) to Manually Log an Event with a Comment. The Available Events are limited to Events belonging to the 'Manual' Service Type.

### **Code Word/PIN Required**

A 'Proceed Anyway' button has been added to the Site Rule - Code Word/PIN Required to Full Clear validation.

### **Alarm Confirmation**

Functionality added to the Alarm Confirmation setup to configure 'Escalated' alarms. When two points assigned to the Alarm Confirmation are tripped within the Confirm Period, an additional event code associated with the Alarm Confirmation is logged.

### **UDF Fields**

UDF Fields/Values are displayed in a tab on the Alarm Dispatch window. UDF Fields are only displayed if they are flagged for 'Dispatch' on the UDF setup and if there is a UDF Value associated with the Site, Device, Site Group. If there are no UDF values entered for the Site/Device/Group, the tab will not appear.

### **Alarm Buffer (All)**

The Alarm Buffer (All) window has been restructured to include the alarm filter, an alarm summary of all the alarms by priority group, and a list of active alarms.

The Alarm List displays 25 Alarms, with more available by navigating with the More and Previous buttons.

The top left filter includes an 'Auto Refresh' filter. When this is checked, the Alarm List will refresh automatically, when unchecked, the Alarm List will be static. The Alarm Summary will continue to refresh automatically, with the Alarm List easier to navigate with the More and Previous Buttons.

### **Auto Process SMS Keyword**

SMS Auto Processes include an SMS Keyword list (accessed by the Key Button). If one of the Keywords listed is returned via SMS in response to the Auto Process, the Event Code associated with the Keyword is logged and an SMS message sent back with the associated Reply.

### **Alt Device ID**

Added Alt Device ID to Device. If there is a value in this field, it will override the Xmit# for signal processing.

Alt Device ID displays in the fly out in Alarm Dispatch

### **Permissions**

Manual Entry (Site Access | Alarm Dispatch)
