STAGES 2.2.7 Release Notes
June 25, 2010

Images
Button Images display an Alternate Image in certain situations.

A blue image indicates that there is information stored within the window opened by the button. For Example, the Button images for Documents and Patients are blue when there is document/patient information entered. Device Test on the Alarm Dispatch is blue when a Test is in effect.

A red image indicates that there is a piece of information that cancels or overrides the information that is shown on the screen. For example, Phone Override turns red when there is an Override in effect or the phone has been marked as bad, and Temporarily Inactivate Contact turns red when the contact is inactive.

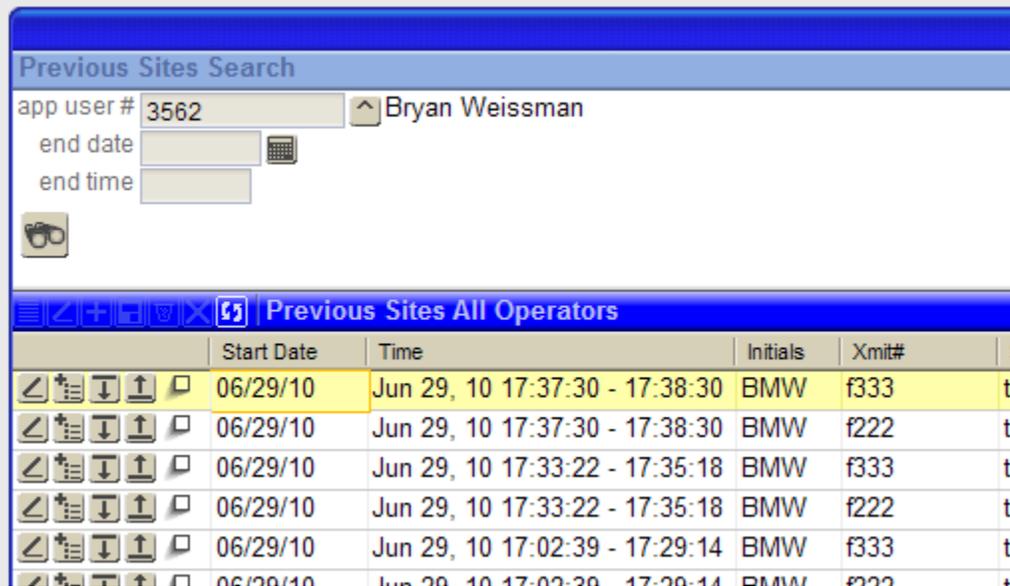

List Delete
List Delete capabilities have been added to several setup tables.

Previous Site Search
The Previous Site All has been replaced by Previous Site Search. Parameters can be entered for App User Num (blank for all) and an end date/time. More previous sites can be viewed using the more and previous buttons.

A new permission 'Other Users' has been added under the Site Group Search. When this is granted, the user can use the App User Num field. When it is not granted, the App User Num field is hidden and the user's App User Num is defaulted so only the user's Previous Sites will be available.

Site Activate

Site Activate has been redesigned to bring more information into one single window for quick data entry.

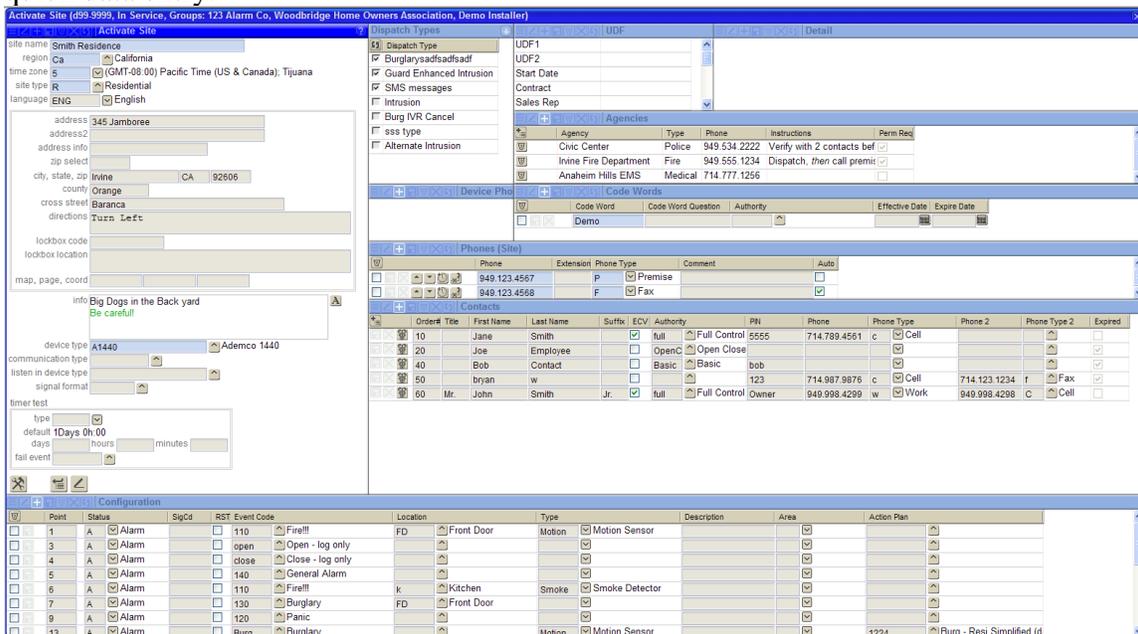

Lockbox

Fields for Lockbox Code and Lockbox Location have been added to the Site data entry window. The fields are displayed in the Site Summary fly-out of the Alarm Dispatch

window. The Variables [LockBoxCode] and [LockBoxLocation] have been added for use in Email/SMS templates and Rich-Text fields such as Site Info and Action Plan Instructions.

Contacts

'Link Existing Contact' hyperlink has been added to the bottom of the Contacts window to attach Contacts that already exist in the database to the site.

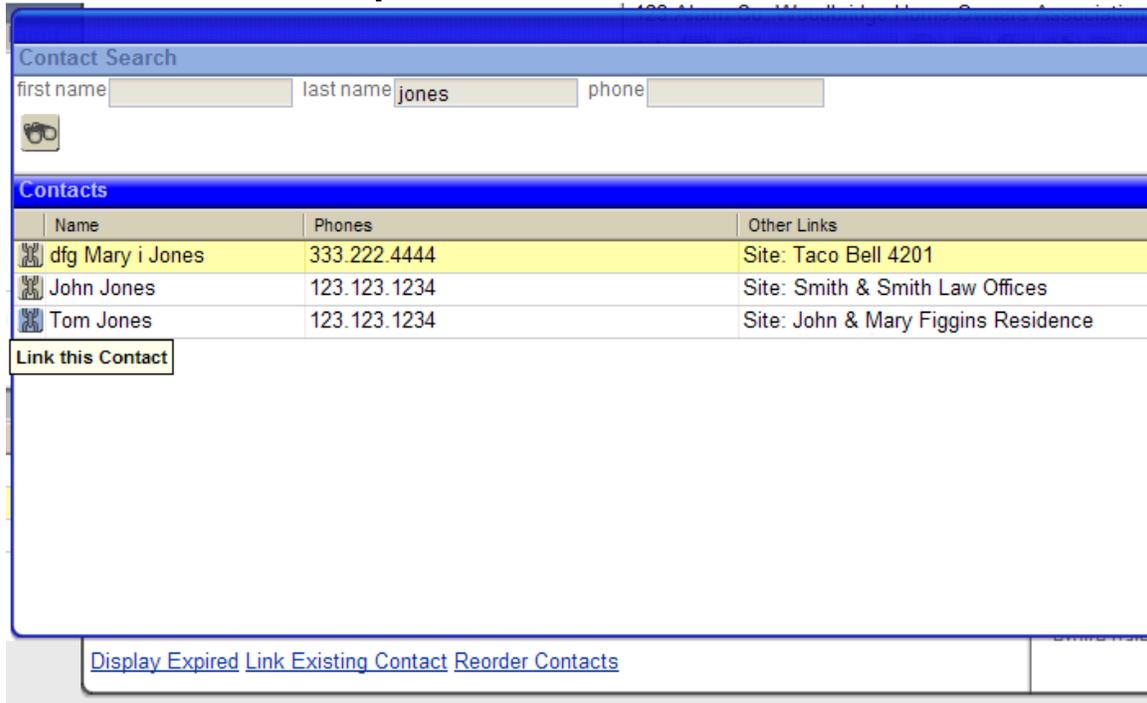

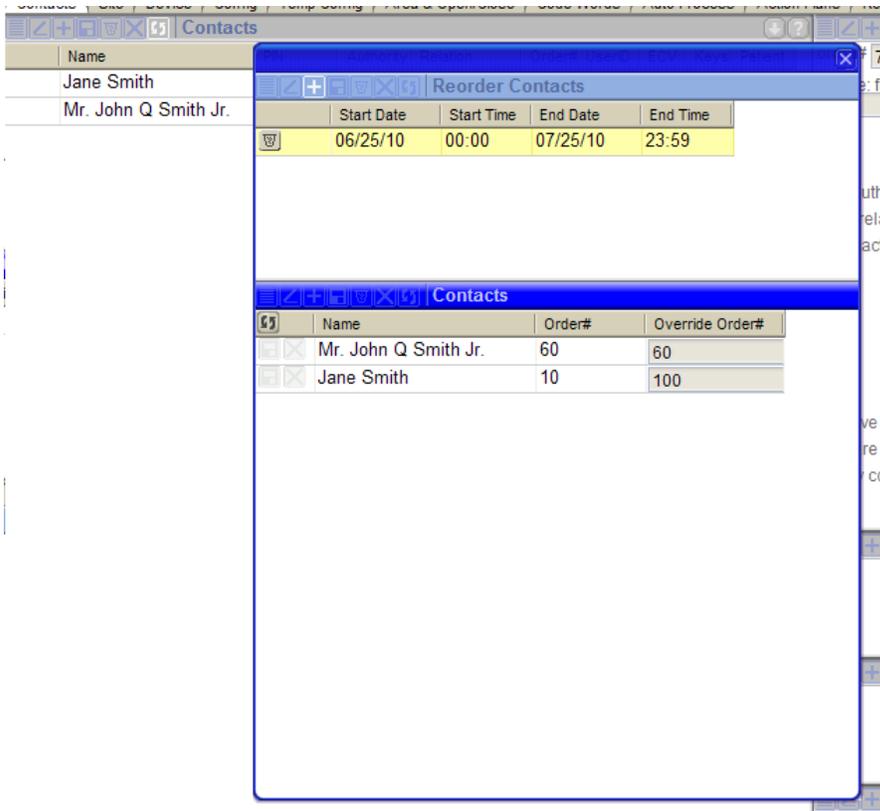

Contacts can be deleted from the Contact Detail.

Link Existing Contact and Contact Delete functionality is tied to the Contact Insert permission.

A Reorder Contact link has been added at the bottom of the Contacts List. A date/time range can be entered to temporarily reorder the contacts for call lists/call routines.

When the Contacts are reordered and in effect, the link will display in red.

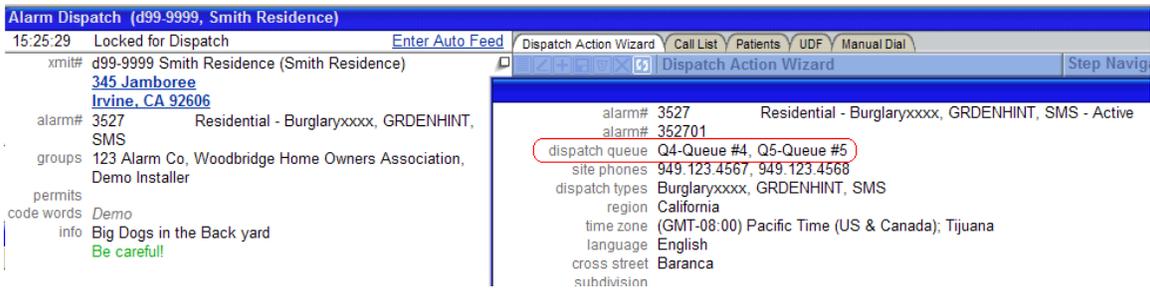

Added Permissions 'Contact Reorder' and 'Contact Reorder Write' under Site Access | Data Entry | Contacts

Additional PINs can be entered for a Contact with the Addition PIN button on Contact Detail. If there are additional PINs for the Contact, the button is displayed in blue.

Site Summary

Dispatch Queue has been added to Site Summary (flyout) to display the queues that the current alarm is qualified for.

Alarm Dispatch (d99-9999, Smith Residence)

15:25:29	Locked for Dispatch Enter Auto Feed

Status Bar

Functionality has been added to change how the Auto-Feed Status is styled for display in the status bar. Styles can be added to the Custom.css file in the Custom folder.

For Example:
```
.StatusPanel_StatusBar .Form_StatusBar-Y_Value_Status
    { font-weight:bold; color:#0a0; }
```

● All Queues | ● Auto Feed | ● 15:20
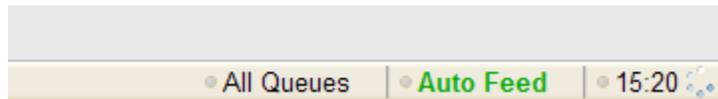

```
.StatusPanel_StatusBar .Form_StatusBar-N_Value_Status
    { font-weight:bold; color:#f00; }
```

● All Queues | ● Not in Auto Feed | ● 15:22

Call Routines

Options have been added to Call Routine for 'Stop Call Rule', 'Contact Made Rule', and 'Retry Phone Rule'.

Call Routine

	Call Routine	Description	Max Recipient	Max Phone	Verify Code Word	Use Phone Type Order	Stop Call Rule	Contact Made Rule	Retry Phone Rule
	BurgContact	Contacts on Burg	99	99	☐	☐	☑ All Attempted	☑ One Contact Made	☑ Contact Made & New
	BurgPrem	Initial Call to Premise on Burg. Ring 4 times. de	1	3	☐	☐	One Reached	One Contact Made	All
	BZ0	One try only	99	99	☐	☐	All Attempted	All Contact Made	Contact Made & New
	BZ3	Try 3 times BZ/BC	5	3	☐	☐	☑	☑	Contact Failed & New
	BZ999	Try til you die	5	5	☐	☐	☑	☑	Contact Made & Contact Failed
	C	Call Contacts	1	99	☑	☐	☑	☑	Contact Made
	FirePrem	Initial Call to Premise on Fire Alarm	1	99	☐	☐	☑	☑	Contact Failed
	Inform	Inform Contact of Situation	2	3	☐	☐	☑	☑	New

Stop Call Rule defines when the Call Step is completed. 'One Reached' will proceed to the next step as soon as contact is made with one recipient. 'All Attempted' will keep calling recipients until the recipient list is exhausted. When 'All Attempted' is selected, the Contact Made Rule defines the whether the Action Plan will go to the Contact Made step or the Contact Not Made step. 'One Contact Made' goes to the Contact Made step if at least one recipient was contacted. 'All Contact Made' only goes to the Contact Made step if every recipient was contacted.

The Retry Phone Rule defines which phones are available to call in the step. The standard option is 'Contact Made & New' which will only call phones that have already had a contact made, or have not yet been called. 'All' will call any phone, regardless of

previous calls. 'Contact Failed & New' will only call phones that have not already made contact. 'Contact Made & Contact Failed' will only call phones that have already been called. 'Contact Made' will only call phones that have already had a contact made. 'Contact Failed' will only call phones that have already been called and had contact not made. 'New' will only call phones that have not been called previously.

Data Change Log

Added Site Group Changes (Utilities | Lists | Site Group Changes) to display the data change log to Site Groups.

Added Permission 'Site Group Changes' under Utilities | Lists

Signal Format

Added Signal Format Default window to add Default Configurations for Signal Formats based on Device Type/Site Type combinations

Added Signal Format as a condition in Site Group Default Device

Auto Process

Site Auto Process includes all Auto Processes. Each Auto Process is selected by default and can be deselected to exclude from affecting the site.

Action Plan

Added Action Plan Item Export

Added Permissions for 'Action Plan Export' under Setup | Alarm Processing | Action Plan and 'Site Action Plan Export' under Site Access | Data Entry | Site Action Plan.

Pending Restore

A Full Clear will not reset the Schedule Date for already existing Pending Restore Expected Events.
