stages™ Release Notes 2.6.11
May 2020

DEVICE TEST
Device Tests Display Order
Device Tests will now display in the following order:
1. Active Device Tests
2. Scheduled Tests
3. Active Recurring Tests
4. Expired Tests (Device and Recurring)

Multi-Site Tests
Multi-Site Tests will use the Confirmation Scripts of the associated Test Category.

Site Group Test Options
A new tab has been added in Site Group setup for Test Options. Options include "Test Message" and "Verification Message". These messages will display when a site in that Site Group goes into the test dialogue, and when a contact is verified from the test dialogue.

Disallow Verify Contact for Test Override
A new Site Rule has been added to Sites and Site Groups to not allow the Override button to appear during tests and force that a contact be verified.

stages™ Release Notes 2.6.11

SIGNAL PROCESSING
Point
The Point field has been expanded to 50 characters.

Event Rule
'Abort New Priority' has been added so that the abort signals can change the priority of the alarm rather than abort the alarm. Leave this field blank to have the abort clear the alarm.

The Event Rule Detail window has been reorganized for spacing concerns.

Receiver Task Restore
When a Receiver Task Account is in alarm and the task returns to normal status, stages™ will log a Restore event to the Task Account.   The stages™ team does not recommend using these restores to abort the alarm. Be sure that you are following UL Compliance guidelines before automating any of these signals.

Signal Processing Auto Evaluation By Point
A new option has been added to Auto Evaluation to evaluate whether a certain point has been hit over a threshold. A new field, By Point, has been added to use this new evaluation check. If any point(s) have reached the threshold during the evaluation period, the evaluation will return the True Event Code entered. When this happens, the points will be displayed in the comment.

SETUP

Auto Evaluations
Auto Evaluation Setup has been restructured to use Multi-Select lists instead of comma delineated lists. Conversions to this format will be done as part of the upgrade.

Event Code
The Search in Event Code setup window can now use Report Code.

UDF
A Search window has been added to the UDF setup window.

SMS Opt Out Word
Replying to an SMS with any of the words entered in this table to turn the auto-notify flag off for that phone.
**'STOP' will continue to be used in addition to the words entered here.
>   *A new permission has been added for Setup | Phone Setup | SMS Opt Out Word*

Invalid Phone Numbers
Phone numbers entered in this setup will not be allowed to be entered into a phone number in stages™. For instance, 911 can be disallowed.

Holidays
By Default, temporary schedules override Holidays. A new flag has been added to the Holiday setup window to override the temporary schedule on a site and follow the hours for the Holiday.

NOTIFICATIONS

Data Change Notification Report

A new Data Change Report has been created to list out all changes made in the site. The Data Change Report can be run at any time from the Changes tab in Site Data Entry.

Additionally, the way the Data Change Notification is set up has been changed. Instead of checking the "Data" flag on Emails and Fax Phones, the Email Address/Fax is ented on the new Data Change Notification are of the Change tab. Existing entries have been converted as part of the upgrade process. In this new window, the report can be configured to Include CodeWord/PIN, and has an Option to get the new report or continue to get the Site Database Report like previous versions.

A new permission has been added for Site Access | Data Entry | Data Change | Data Change Notification Write

stages™ Release Notes 2.6.11

IVR Warning

Stages will generate an alarm when there are IVR Calls waiting for more than 30 minutes. An account with xmit "IVRStatus" must be entered.

Opt In

Auto Processes using the Opt In can send out an email/sms with a link to a Landing Page. A new webservice will need to be installed for this functionality. Please inquire for more information if needed.

Chat

Chat messages sent to Site Phones and Email Addresses will each have its own chat member.

REPORTS

Device With Timer Test Report

The Device With Timer Test data window has been added as a Report that can be sent as a PDF.

A new permission has been added Reports | Device With Timer Test

Alarm Certificate

An Alarm Certificate has been added to stages™ to print a form for proof to provide an Insurance Company. From the Site Data Entry, a new link is available to open the Insurance Information. Once that info has been entered, a form can be generated in PDF. The window is accessible in the External Application as well.

A new permission has been added Site Access | Data Entry | Site Insurance
A new external permission has been added External Application | Site Insurance

Miscellaneous

Stages™ Help
Stages™ Help Documentation is now located locally on the IIS Servers of stages™ systems. Help documents will be improved in future releases with additional and more up-to-date information. No Login will be required to access the Documentation.

Site Lookup
Integration Platform has been added as a Search Parameter.

Maps
Bing Maps has been added as an option when opening maps from addresses and when displaying history events with Longitude and Latitude. The option is set in stages™ Options.

DataLoc
County will now be returned from DataLoc calls.

Site Note
Site Notes now display 'Created By' with the user that originally created the note.

Variables
New variables have been added for [HistoryServerNum] and [HistorySeqNum].

Site Group Copy
Site Group Hours will be copied.

Site Group Licenses
A new option has been added to Site Group Setup to only display Site Group Licenses, and not Central Station licenses in the Alarm Dispatch site summary.

Last Signal *(Data | Site/Devices | Last Signal)*
This new window produces a list of all sites in a site group and the date of the last signal received into stages™. The list can include OOS.
> *A new permission has been added for Data | Site/Device | Last Signal*

Devices with URL *(Data | Site/Devices | Devices with URL)*
This new window produces a list of all sites with a URL or Program Path entered. The list can be filtered by Site Group.
> *A new permission has been added for Data | Site/Device | Device with URL*
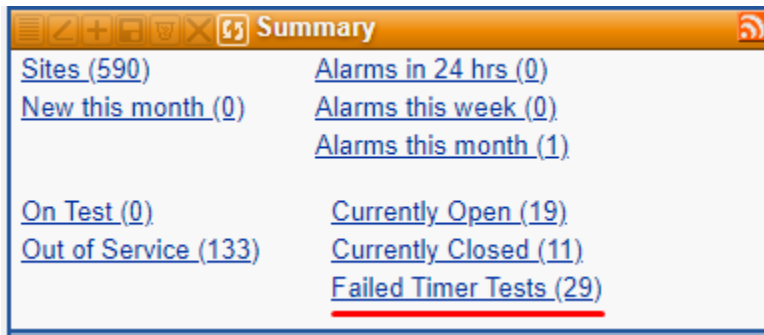

Task No Signal Warning Time
When the active server is switched, the No Signal Warning Time Signal will not be generated on a Task Account if the time on the server is less than the No Signal Warning Time. Once the time on the Active Server is greater than the Task's No Signal Warning Time, the Signal will process as normal.

stages™ Release Notes 2.6.11

EXTERNAL APPLICATION

Summary

Accounts in the Failed Timer Test state has been added to the Summary window.

Integration Platform

Integration Platform has been added to the New Site/Device window.

Mass On Test

Mass On Test has been added to the External Application. A new stages™ Option has been added to supply a default test category for external Mass On Test.

A new permission has been added for Administrator | Mass On Test/Runaway

stages™ Release Notes 2.6.11
